Section B Writing & Grammar- 10 marks

Section C Literature - 15 marks

Section A- Reading

1. Read the given passage carefully and answer the questions that follow:

The Amazing Ants

1. Ants are fascinating creatures that live in colonies and work together to achieve common goals. They are known for their hard work, organization, and resilience. Let's learn more about these amazing insects.

2. Ants live in colonies that can range in size from just a few individuals to millions of ants. Each colony has a queen ant, whose main job is to lay eggs, and worker ants, who perform various tasks such as foraging for food, caring for the young, and defending the colony.

3. One of the most remarkable things about ants is their ability to communicate with each other. They use pheromones, which are chemical signals, to send messages to other ants in the colony. For example, when a worker ant finds food, it will leave a trail of pheromones behind it so that other ants can follow the scent and locate the food source.

4. Ants are also incredibly strong for their size. They can carry objects that are many times their own body weight, making them efficient at transporting food and building nests. Some ants even have specialized roles, such as soldier ants, which defend the colony from predators, and worker ants, which gather food and take care of the young.

5. Despite their small size, ants play a crucial role in the ecosystem. They help to aerate the soil, control pests, and even disperse seeds. Without ants, many ecosystems would not function properly.

In conclusion, ants are truly amazing insects that demonstrate the power of teamwork, communication, and resilience. By working together, ants can accomplish great things and thrive in a wide range of environments.

Based on your understanding of the passage, answer the following questions:

[5]
